3rd August, 1976.

John Binns & Sons (Springs) Ltd.,
Fleece Street,
KEIGHLEY,
Yorks BD21 3QS.

Attention Mr. A. Driver, Managing Director.

Dear Sirs,

We refer to your telephone conversation with this office last week and as promised enclose a copy of our drawing No. BM 1859 showing general proposed layout of the double dip tank unit which has been the subject of our recent discussion.

We have indicated on our drawing all the relevant details and trust that you find it clear enough to obtain an adequate picture of the proposed unit.

Basically the assembly comprises a hand operated pump connected by hydraulic lines through two selector valves to the separate hydraulic rams which raise the work tables. It will be possible to raise both the tables together or alternatively each can be raised separately and also they can be lowered either separately or together.

The adjustable work supports shown in the upper part of the drawing are purely and simply cross members attached to the vertical supports and are adjustable to suit various lengths of articles to be dipped.

As quoted on the telephone we can supply a single unit for the price of £428.00. and a double unit for the price of £750.00.

We trust that you will find the offer of interest to you and we shall look forward to hearing from you further. Should there be any points you wish to raise however please do not hesitate to contact us.

Yours faithfully,
HERBERT SMITH & CO. (GRINDING) LTD.

W. BRANTON, Technical Director.
